

Date Storage:

text file in ASCII format

date.txt

line →	1.23	21	9.2	-1.1
line →	,	,	,	,
	,	,	,	,
	,	,	,	,

arrayed in line and columns

size of the file =  $(8 \text{ bits}) \times \text{line} \times \# \text{ characters per line}$   
AB

works but not efficient for large data samples

spreadsheet: excel, numbers, Google Sheet, open office

CSV: comma separated values

a, b, c, d, ..., z

↳ , : FIELD separator

machine / OS / architecture dependent

At Root we use TFile class

THIF

1.2  $\leftarrow$  double

hl  $\leftarrow$  TIFF ?

how can we store them in a file?

Simple example

$x \in [a, b]$

True value

Resolution  
effect

$x_0 \in [a, b]$

$$\sigma = 10\% \approx 0.10$$

$x_0 = 1.1$

$$w = \overbrace{1.1}^{x_0} \times 0.10 \approx 0.11$$

$$w = 0.11$$

$$1.1 + 3 \times 0.11 = 1.43$$

$$1.1 - 3 \times 0.11 = 0.77$$

$$x_0 = 0.9$$

$$\textcircled{w} = \frac{0.9 \times 0.10}{\sqrt{x_0 \times \sigma}} = \textcircled{0.09}$$

$$0.9 - 3 \times 0.09 = 0.9 - 0.27 = 0.63$$

Exercise: generate  $x \in [0.999, 1.001]$   
 $(0.999999, 0.000001)$

↙ you should see std dev  $\approx 0.10$

collision

1 event

$N$  particles      one per event  
 momentum }  
 energy      } one per particle  
 primary vertex      one per event

Tree

└─ Branches: #part.  
PV  
mom  
energy.

} structure

Data points or events : "leafs"

event 1 N = 10

event 2 N = 3

event 3 N = 6

!

event 10<sup>6</sup> N = 2

Simple Tree example

def tree

↳ value / 0

↳ error / 0

tree → Fill() →
